## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Tomie.

Tomie (Figs. 14-15) teaches a high frequency input/output feedthrough conductor including: a line conductor (19) has identical tapers having length and width dimensions (i.e. adjusted in the length and width directions since the taper is angled in both of the dimensions) at an area where the conductor inputs and outputs from a upper dielectric substrate (16) (i.e. a parasitic element since the dielectric material of the upper substrate (16) is inherently of a material having different dielectric properties from the air which is over the outside portions of the conductor and causes losses) for line impedance matching (Claims 1-2) (see Col. 3, lines 1-6); the structure is designed with dimensions so that the device has reduced insertion losses (i.e. cancelled unwanted electrical characteristics) and excellent transmission characteristics thus inherently the electrical characteristics along the signal path would have to be determined (e.g. see

Col. 3, lines 1-6) (Claim 1); and the input and output sections (19b and 19c) of the line can be considered signal paths (Claim 4).

***Allowable Subject Matter***

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
